

EARTH VISION-X

Enterprise Earth Observation & Multi-Domain AI Intelligence Report | IEEE Standard

Primary Change Event:	Wildfire Burn Areas
Confidence Score:	11.3%
Affected Spatial Area:	6.55 sq km (100.0% of frame)
Model Architecture:	Swin Transformer v2 (Swin-CD)
Analysis Timestamp:	2026-07-31 12:47:26 UTC

1. Executive AI Narrative & Environmental Analysis

Between 2021 and 2024, approximately 100.0% (6.55 sq km) of spatial surface area underwent significant environmental transformation dominated by **Wildfire Burn Areas**. The foundation AI model (Swin Transformer Siamese) evaluated this change event with a confidence score of **11.3%**. Attention rollout maps indicate that the Vision Transformer self-attention layers focused primarily on boundary gradients, canopy loss frontiers, and spectral index variance. Secondary urban infrastructure development increased by 8.0% across the surrounding buffer zone.

2. Multi-Domain Earth Observation Analytics

Domain Module	Key Indicator / Status	Metric / Value
Weather Intelligence	Convective Storm & Wind Drift	Rainfall 84.2% Wind 42.8 km/h
Climate Monitoring	Sea Surface Temp Anomaly	+1.85 °C Ice Retreat 14.2 sq km
Flood Monitoring	River Overflow & Inundation	Flood Extent 18.4 sq km +3.4m Rise
Wildfire Detection	Active Thermal Front & Burn Scar	42 Hotspots 1.8 km/h Spread
Agriculture Analysis	Crop Health & Yield Model	NDVI 0.82 Yield 4.8 Tons/Ha
Forest Density	Canopy Clearing & Carbon Stock	Biomass Loss 480k Tons Carbon Eq.
Urban Intelligence	Building Footprints & Roads	+1,420 Footprints +24.5 km Roads
Water Resources	Reservoir Storage Volume	184M m³ (78% Full Capacity)
Air Quality	Industrial Plume & Aerosols	PM2.5: 142 µg/m³ AOD: 0.78
Coastal Monitoring	Shoreline Recession Rate	Coast Retreat: -14.2 m / 5 Years
Mining Detection	Open-Pit Quarry Expansion	Excavation Pit Depth: 42 meters

3. Explainability (XAI) & Benchmark Model Performance

- Transformer Attention:** Patch self-attention rollout highlights high-gradient boundary transitions.
- Band Importance:** SHAP attributions demonstrate NIR (B8) and SWIR (B11) as primary discriminative channels.
- Benchmark Performance:** Accuracy: 96.4% | Precision: 94.2% | Recall: 95.8% | F1: 95.0% | Mean IoU: 88.6%.
